How do I make my HTML website look good using CSS? Where do I start?

Start by understanding CSS selectors (like tag names, classes, and IDs) to target specific HTML elements.

Then, learn common properties like `color`, `background-color`, `font-family`, `font-size`,

**`margin`, `padding`, and
`border`. Begin by styling
the basic elements you
created in HTML to see
immediate visual changes.**

3

**I've heard about 'responsive
design.' How does CSS help
me achieve this for my
website?**

**Responsive design ensures
your website looks good on
all devices. CSS helps with
this through media queries
(`@media`) which allow you
to apply different styles**

**based on screen size,
orientation, or resolution.
Flexbox and CSS Grid are
also powerful layout
modules for creating
flexible and adaptable page
structures.**

4

**What's the difference
between inline, internal,
and external CSS, and
which is best practice?**

Inline CSS is applied directly to an HTML element using the `style` attribute. Internal CSS is placed within `<style>` tags in the `<head>` of your HTML document. External CSS is written in a separate `.css` file and linked to your HTML. External CSS is generally the best practice for maintainability, organization, and reusability.⁵

**How can I add interactive
elements or animations to**

**my HTML and CSS website
without JavaScript?**

**While complex interactivity
requires JavaScript, CSS
alone can achieve subtle
animations and transitions.**

**Use the ``transition``
property to smoothly
change CSS property values
over a duration. You can
also use ``animation`` and
``@keyframes`` to create
more complex, looping
animations for elements
like hover effects, loading
spinners, or visual cues.**
